

CYANOTYPE

Tutorial - english

First, we will measure our papers in the dimensions of 17 x 24 cm

Then we will cut them

When our papers
are prepared...

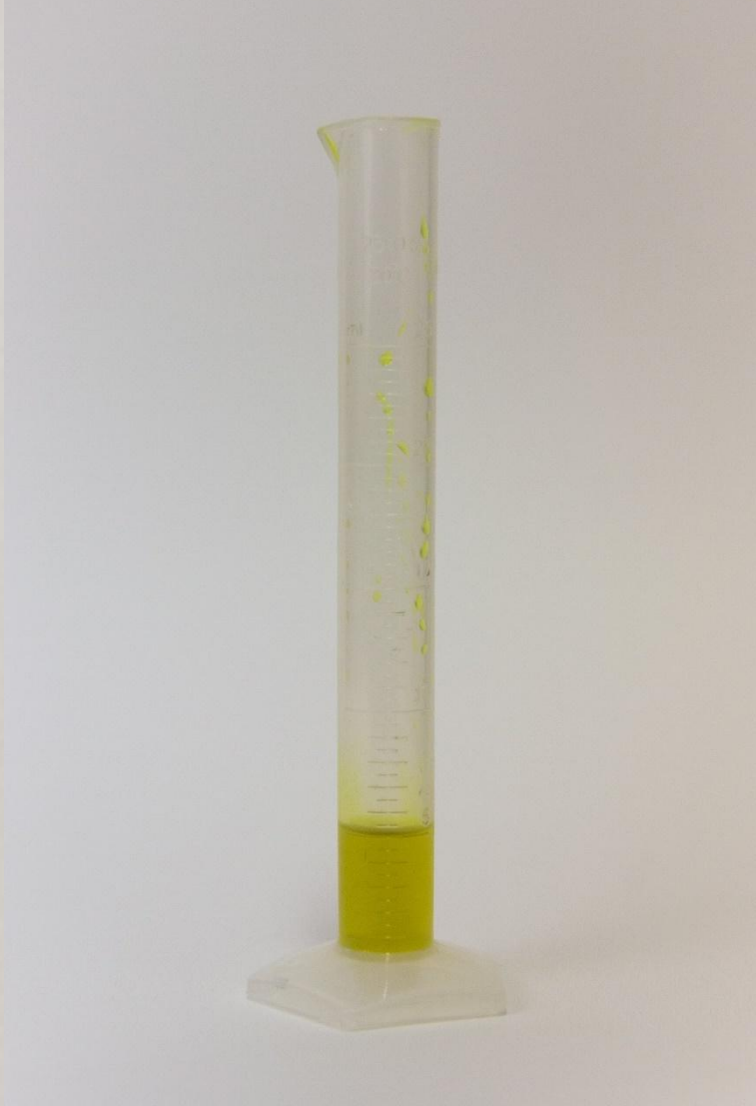

... it's time to
mix the chemicals
in the ratio of 1:1

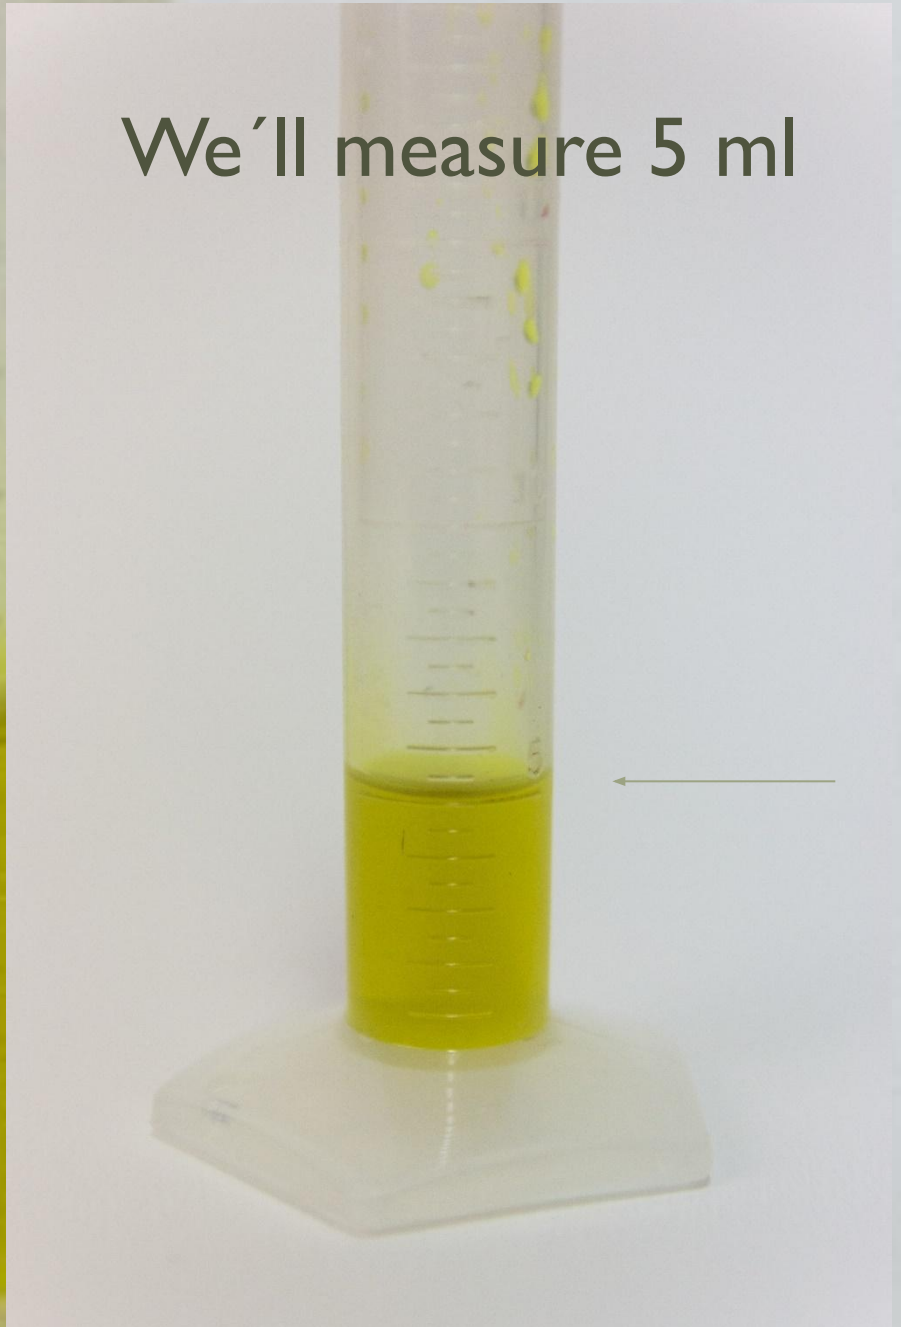

We will start with
sensitizer A

We'll measure 5 ml

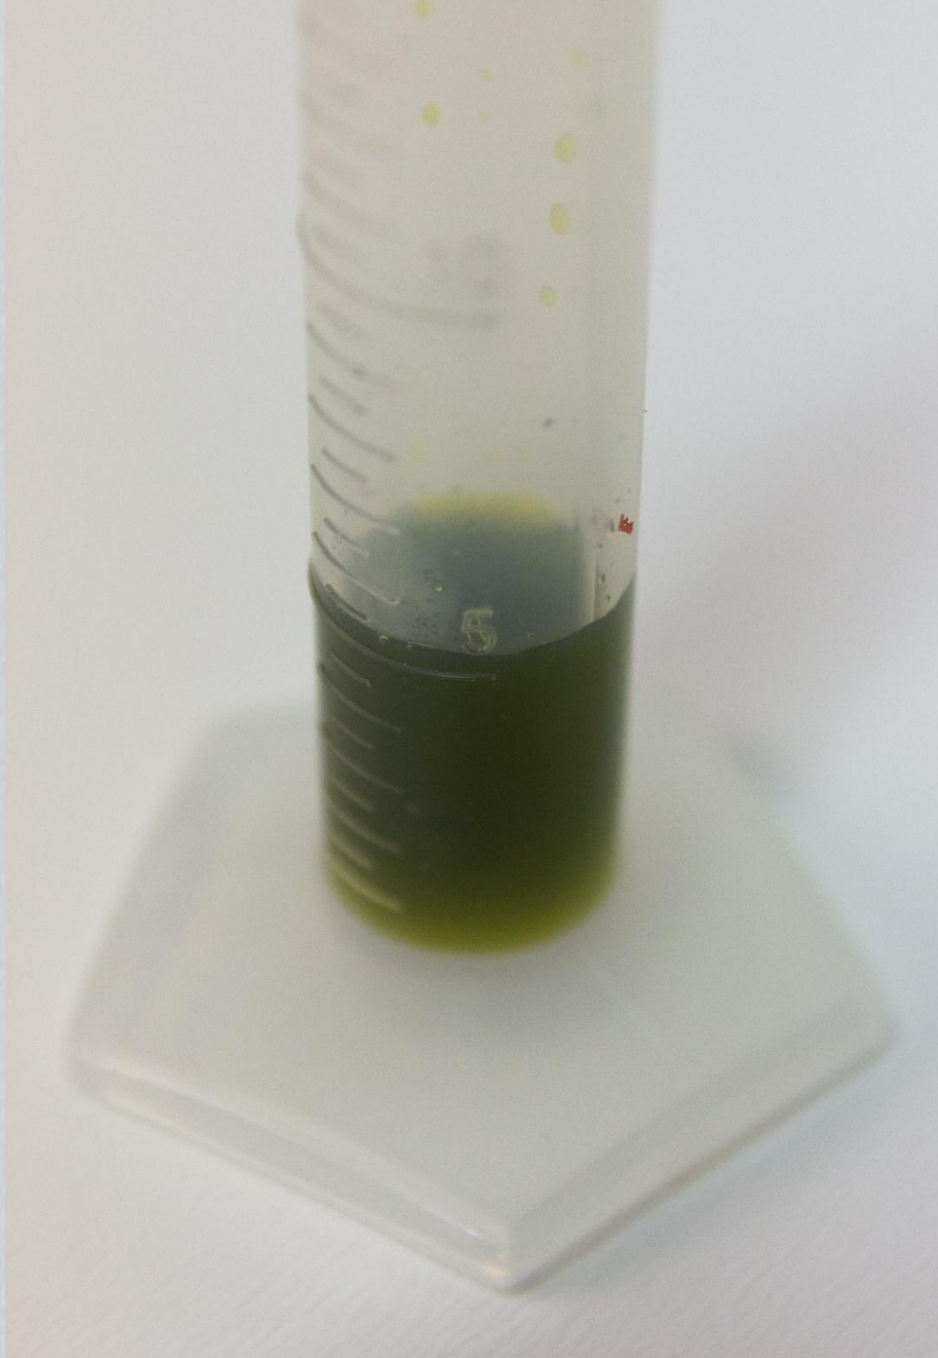

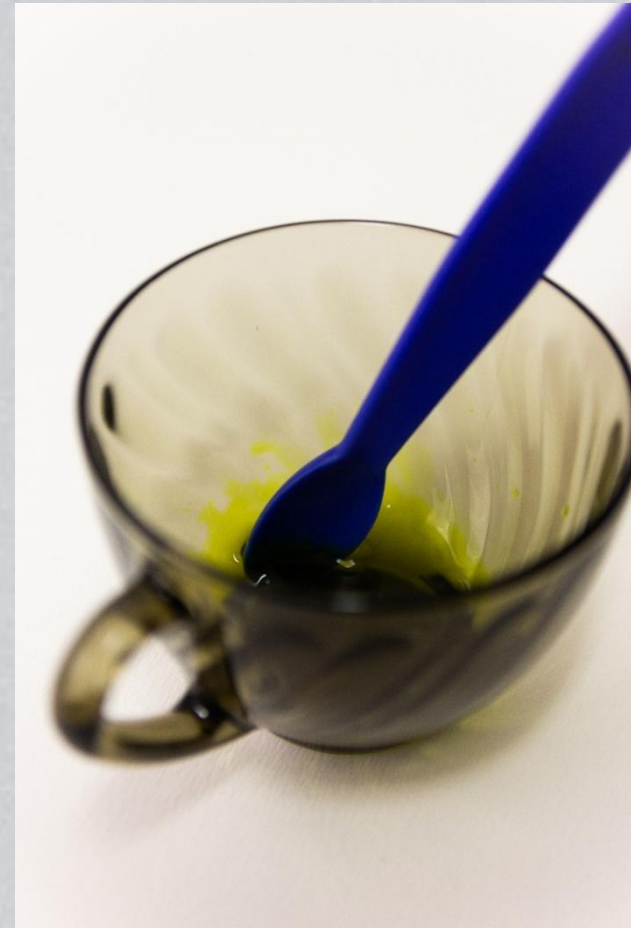

And we'll pour it in a cup

Then we'll measure
sensitizer B

Add it to the cup

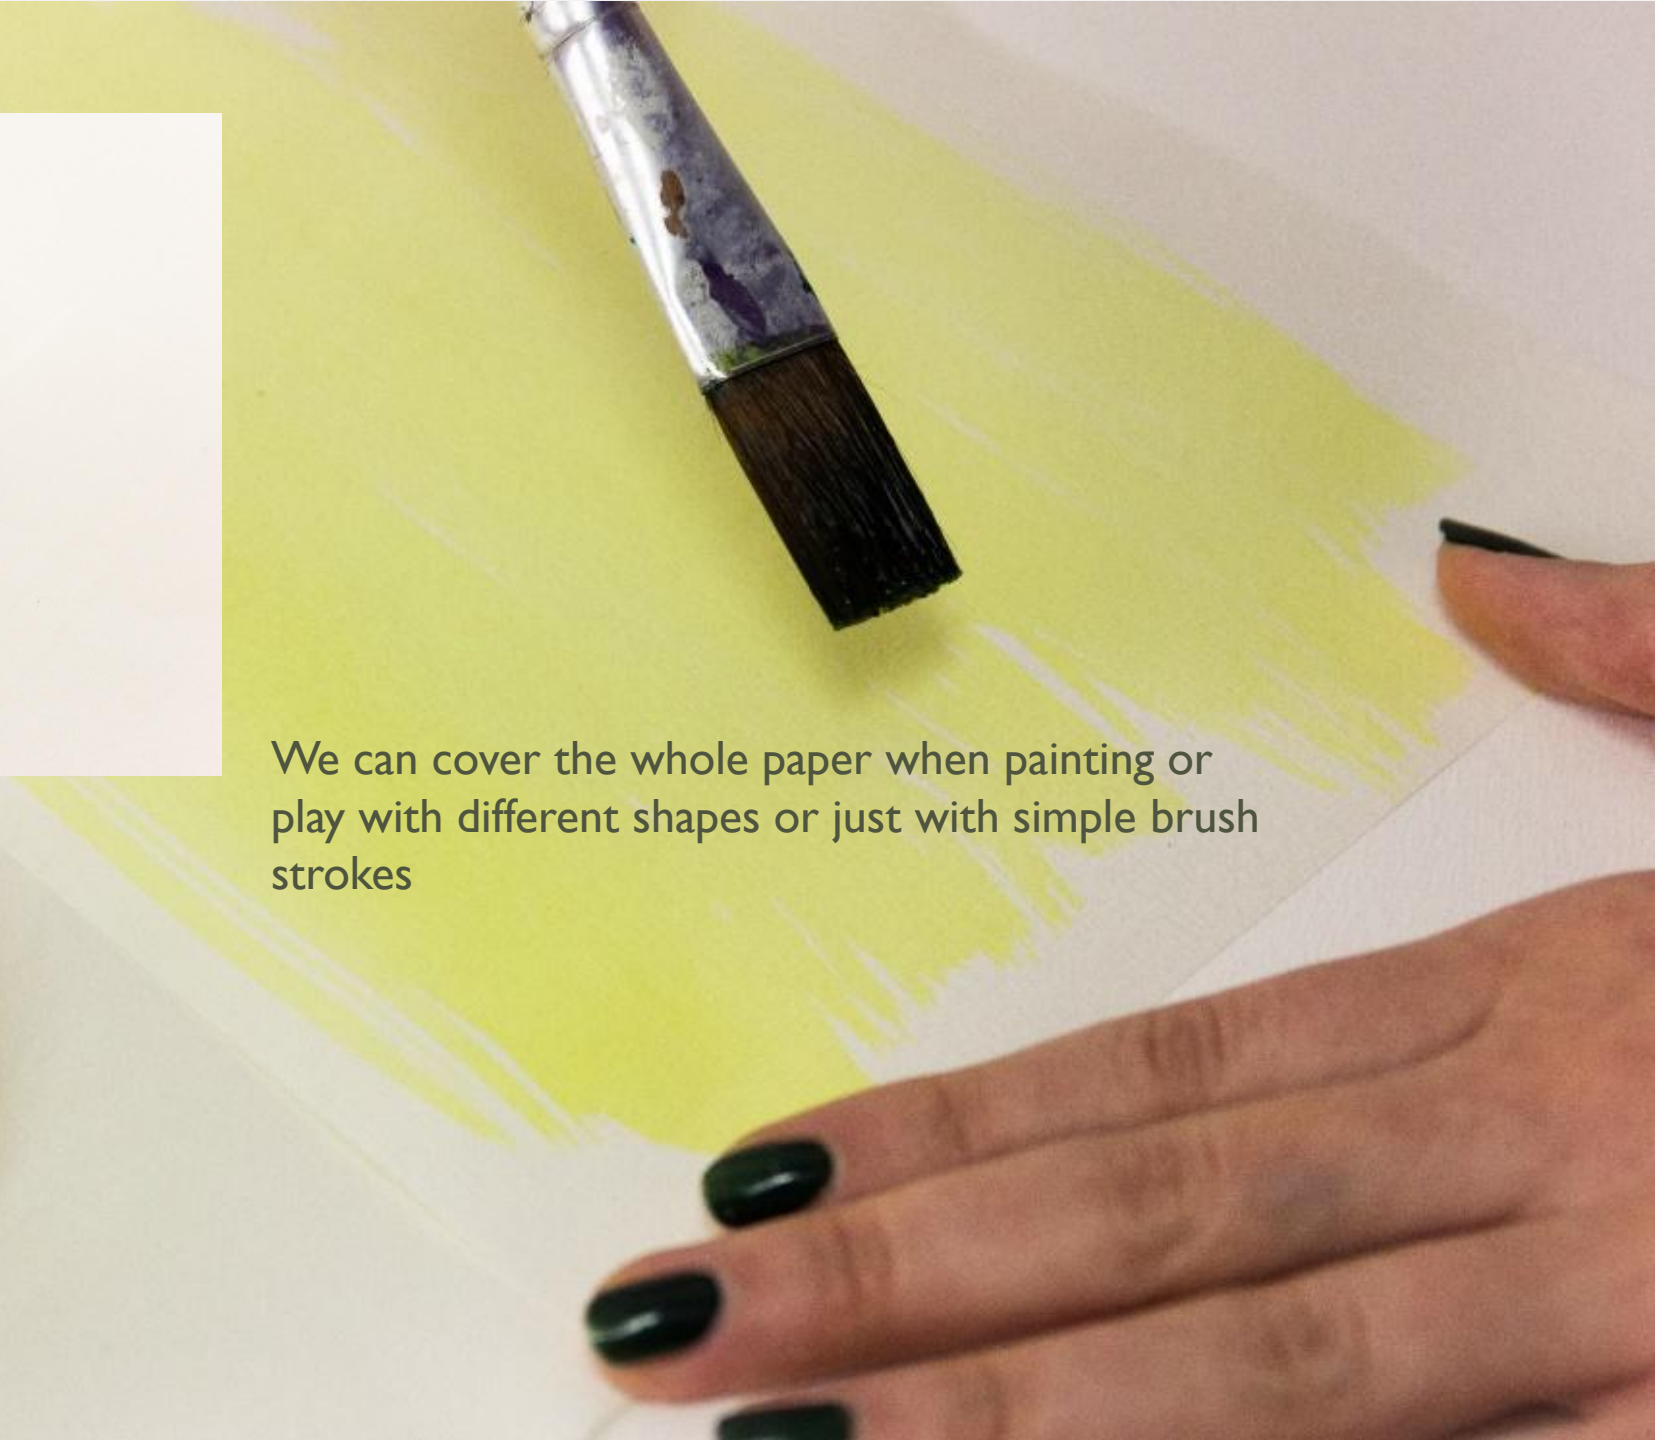

And properly mix it

We can cover the whole paper when painting or play with different shapes or just with simple brush strokes

When the papers are coated,
we dry them thoroughly

While using the heat gun,
we use 100° degrees max

After successfully drying the papers, we'll
hide them in a lightproof cover

After printing out
the negatives, we
put the paper,
negative and the
glass on top of
each

We light it up around 10 minutes

After this we can take the picture out

And wash it under
running water

And now we can
enjoy the result!
